DETAILED ACTION

- 1. This action is in response to the amendment filed September 6, 2007.
- 2. Claims 1, 10, 12-14, and 18-20, have been amended and claims 4 and 9 have been cancelled.
- 3. Claims 1-3, 5-8, and 10-20 have been examined and are pending with this action.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.
- 4. Claims 1-3, 5-7, and 10-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Arellano et al. (US 6,694,482 B1).

INDEPENDENT:

As per **claim 1**, Arellano teaches a program drawing-up apparatus comprising:

a client control database storing client information on users (see col.9, lines 24-26: "repository for representations of each user' preferences");

a delivery request acquisition section for acquiring a delivery request from a client apparatus (see col.9, lines 10-12: "allows the end user and/or administrator to specify the user's interest");

a client information acquiring section that acquires the client information based on the delivery request (see col.9, lines 26-31: "Sensors provide the interaction data");

a contents data retrieval section for retrieving contents data according to the delivery request and the client information (see col.17, lines 14-16: "content model is required by a content assembly engine to put together a story tailored to a user's request and profile");

an auxiliary data generation section for generating auxiliary data to be delivered in combination with the contents data based on the retrieved contents data and the client information (see col.9, lines 60-63: "utilized by the Presentation Agent to generate a customized presentation"); and

a program drawing-up section for drawing up a program indicating the sequence of delivery of the contents data and the auxiliary data according to the delivery request (see col.9, lines 60-63: that is utilized by the Presentation Agent to generate a customized presentation; and col.10, lines 13-21: "Presentation Agent generates a presentation by design where the design is constrained by a narrative style").

As per claim 12, teaches a program drawing-up method comprising:

Art Unit: 2155

a step of registering client information on a user in advance (see col.17, lines 4-7: "user's previous interaction history");

a step of acquiring a delivery request from a client apparatus (see col.9, lines 10-12: "allows the end user and/or administrator to specify the user's interest");

a step of acquiring the client information based on the delivery request (see col.9, lines 26-31: "Sensors provide the interaction data");

a step of generating auxiliary data to be delivered in combination with the retrieved contents data based on the retrieved contents data and the client information (see col.9, lines 60-63: "utilized by the Presentation Agent to generate a customized presentation"); and

a step of drawing up a program indicating the sequence of delivery of the contents data and the auxiliary data according to the delivery request (see col.9, lines 60-63: that is utilized by the Presentation Agent to generate a customized presentation; and col.10, lines 13-21: "Presentation Agent generates a presentation by design where the design is constrained by a narrative style").

As per **claim 18**, Arellano teaches a program (see col.8, lines 15-19: "software infrastructure") providing method comprising:

a step of registering client information on a user in advance (see col.17, lines 4-7: "user's previous interaction history");

a step of acquiring a delivery request from a client apparatus (see col.9, lines 10-12: "allows the end user and/or administrator to specify the user's interest");

Art Unit: 2155

a step of acquiring the client information based on the delivery request (see col.9, lines 26-31: "Sensors provide the interaction data");

a step of retrieving contents data according to the delivery request (see col.9, lines 2-9: "enable the capture of relevant interaction data... ");

a step of generating auxiliary data to be delivered in combination with the retrieved contents data based on the retrieved contents data and the client information (see col.9, lines 60-63: "utilized by the Presentation Agent to generate a customized presentation");

a step of drawing up a program indicating the sequence of delivery of the contents data and the auxiliary data according to the delivery request (see col.9, lines 60-63: that is utilized by the Presentation Agent to generate a customized presentation; and col.10, lines 13-21: "Presentation Agent generates a presentation by design where the design is constrained by a narrative style"); and

a step for the client apparatus to receive the contents data delivered from the contents delivery apparatus and the auxiliary data delivered from the program drawing-up apparatus according to the sequence of delivery of the program (see col.8, lines 10-12: "creating and delivering interactive multimedia applications and/or services").

DEPENDENT:

As per **claim 2**, which depends on claim 1, Arellano teaches of further comprising: a program transmission section for transmitting the program drawn up by

Art Unit: 2155

the program drawing-up section to the client apparatus (see col.8, lines 10-12: "creating and delivering interactive multimedia applications and/or services").

As per **claim 3**, which depends on claim 1, Arellano teaches of further comprising: a contents transmission section for transmitting the contents data and the auxiliary data according to the delivery sequence drawn up by the program drawing-up section (see col.8, lines 10-12: "creating and delivering interactive multimedia applications and/or services").

As per **claim 4**, which depends on claim 1, Arellano teaches of further comprising:; wherein the contents data retrieval section retrieves contents data by identifying the user on the basis of the delivery request from the client apparatus, taking out information on the user from the client control data base and adding the taken out user information to the requirements of retrieval.

As per **claim 5**, which depends on claim 1, Arellano further teaches wherein the contents data retrieval section acquires data on the results of retrieval including information on the storage locations of the retrieved contents data (see Fig.7); and the program drawing-up section acquires the information on the storage locations of the contents data and information on the storage locations of the auxiliary data generated by the auxiliary data generation section and draws up a program (see claim 1 rejection above), sequentially arranging the pieces of information on the storage locations in the order of delivery (see col.18, lines 13-15: "hierarchal presentations"; and col.20, lines 6-8: "server would then assemble and generate a complete presentation and return HTML that would be rendered in the browser").

Art Unit: 2155

As per **claim 6**, which depends on claim 5, Arellano further teaches wherein the data on the results of retrieval include information on the storage locations of the contents data and contents profile information relating to the retrieved contents data (implicit: see col.19, lines 39-54: "client is bundled with both runtime engines... The story, content, and presentation database of user are remotely based"); and the auxiliary data generation section generates auxiliary data, utilizing the contents profile information (see col.9, lines 57-64: "The User Agent's user model is utilized in the selection process").

As per **claim 7**, which depends on claim 6, Arellano further teaches wherein the auxiliary data are narration data relating to the contents data; and the auxiliary data generation section generates narration data, utilizing the contents profile information (see col.9, lines 57-60: "The Story Agent... selects the appropriate content elements and collects and organizes these elements as prescribed by an appropriate class of narrative framework").

As per claim 10, which depends on claim 7, Arellano further teaches wherein the contents profile information contains strings of words such as attributes and keywords characterizing the contents (see col.17, lines 16-19: "semantically"); and the auxiliary data generation section has templates for specifying the structures of various narrations, narration parts data including set phrases and words to be put in each template (see col.17, lines 16-19: "semantically to form a story"), a narration control database for controlling the narration parts data and narration material data to be used

Art Unit: 2155

for preparing the narration parts data (see col.18, lines 6-21: "template... fine level of specification and control").

As per **claim 11**, which depends on claim 10, Arellano further teaches wherein the auxiliary data generation section generates the narration data by selecting a template suited for the delivery request from the client (see col.18, lines 6-21: "template... fine level of specification and control") and putting set phrase data and word data in the template on the basis of the contents profile information (see col.17, lines 16-19: "semantically to form a story").

As per **claim 13**, Arellano further teaches a program drawing-up computer program embodied in a recording medium in a manner readable by a computer, the program operating the computer as a program drawing-up apparatus according to claim 1 (see col.8, lines 15-19: "software infrastructure").

As per **claim 14**, Arellano further teaches a recording embodying a computer program in a manner readable by a computer, the program operating the computer as a program drawing-up apparatus according to claim 1 (see col.40, lines 5-7: "computer readable medium").

As per **claim 15**, Arellano further teaches a program providing system comprising:

a program drawing-up apparatus according to claim 1 (see claim 1 rejection above);

a contents delivery apparatus storing the contents data (see col.9, lines 2-5: "storage"); and

Art Unit: 2155

a client apparatus adapted to transmit a delivery request to the program drawingup apparatus and receive contents data and auxiliary (see col.19 line 59-col.20, line 8).

As per **claim 16**, which depends on claim 15, Arellano further teaches wherein the program drawing-up apparatus transmits a program drawn up by way of the program drawing-up section in response to the delivery request from the client apparatus (see col.17, lines 14-16); and the client apparatus receives the contents data delivered from the contents delivery apparatus and the auxiliary data delivered from the program drawing-up apparatus according to the received program (see col.20, lines 6-8).

As per claim 17, which depends on claim 15, Arellano further teaches wherein the program drawing-up apparatus causes the contents data from the contents delivery apparatus and the auxiliary data from the auxiliary data generation section to be transmitted to the client apparatus according to the sequence of delivery of the program drawn up by the program drawing-up section in response to the delivery request from the client apparatus (see col.18, lines 13-15: "hierarchal presentations").

As per **claim 19**, Arellano further teaches a program providing computer program embodied in a recording medium in a manner readable by a computer, the program operating the computer as a program providing system according to claim 15 (see col.8, lines 15-19: "software infrastructure").

As per **claim 20**, Arellano further teaches recording medium embodying a computer program in a manner readable by a computer, the program operating the

computer as a program providing system according to claim 15 (see col.40, lines 5-7: "computer readable medium").

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

5. Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Arellano et al. (US 6,694,482 B1) in view of Lewis (US 5,355,472 A).

Arellano teaches all the limitations of claim 8 including wherein the auxiliary data are narration data also relating to a program (see col.10, lines 59-62). However, Arellano does not explicitly teach a program prologue and a program epilogue.

Lewis teaches a program prologue and a program epilogue (see col.6, lines 4-8).

It would have been obvious to a person of ordinary skill in the art at the time the invention was made to modify the system of Arellano in view of Lewis by implementing a program prologue and a program epilogue. One would be motivated to do so because Arellano teaches of a multimedia story. One of ordinary skill in the art knows that stories often comprise prologue and epilogue.

Response to Arguments

6. Applicant(s) arguments filed September 6, 2007 have been fully considered but they are not persuasive. The applicant(s) argue that Arellano does not teach that the generated auxiliary data "is also generated on client information. The applicant(s) seem to assert that because Arellano does not specifically state such limitation that it is not taught.

Arellano teaches of creating a delivering a <u>customized</u> presentation (emphasis added) of at least one multimedia story that is interactive, that dynamically adapts to the user, and that is developed based on a user model, wherein the user model represents interests and trends of the user (see abstract). Arellano further adds that the customized presentation is generated "where the at least one multimedia story allows for multiple presentations of the story" (see col.4, lines 55-58). Furthermore, Arellano teaches that the story is put together "tailored to a user's request and profile" (see col.17, lines 14-16). It is evident from these passages above that one of ordinary skill in the art would concur the limitation argued above, is clearly and explicitly taught by Arellano and is part of the novelty of his invention.

Conclusion

- 7. For the reason above, claims 1-3, 5-8, and 10-20 have been rejected and remain pending.
- 8. Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP

§ 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Michael Y. Won whose telephone number is 571-272-3993. The examiner can normally be reached on M-Th: 7AM-5PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Saleh Najjar can be reached on 571-272-4006. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
